

COURSE COMPLETION REPORT

NEXT GEN TECHNOLOGIES

An Infosys Springboard Certification Program

Submitted by	Vartika Keshari
Roll Number	25SCS1003005238
Programme	B.Tech – Computer Science & Engineering
Institute	IILM University, Greater Noida, U.P.
Course	Next Gen Technologies
Platform	Infosys Springboard
Completion Date	September 8, 2026

Batch: 2025–2029

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

CANDIDATE'S DECLARATION

I, **Vartika Keshari**, hereby declare that the course completion report titled “**Next Gen Technologies**” has been prepared to document my learning and successful completion of the Infosys Springboard certification program. The report presents the course content, learning objectives, pathway, module structure, skills gained and certification information represented in the supplied course material.

The course content and certification details included in this report are based on the provided Infosys Springboard presentation and the supplied certificate image. Any point not supported by the source material has not been presented as a verified course requirement.

Signature: _____

Student Name: Vartika Keshari

Roll No.: 25SCS1003005238

ACKNOWLEDGEMENT

I take this opportunity to express my sincere gratitude to **Infosys Springboard** for providing a structured learning platform through which I completed the **Next Gen Technologies** course. The course provided an organised introduction to emerging technology domains and their relevance to digital transformation.

I am also thankful to **IILM University, Greater Noida, U.P.** and the faculty of the School of Computer Science and Engineering for supporting my academic learning and encouraging me to explore contemporary technologies beyond the classroom.

Finally, I am grateful to everyone whose guidance and encouragement contributed to the successful completion of this learning program.

Student Name: Vartika Keshari

Roll No.: 25SCS1003005238

The following is the certificate embedded in the supplied course presentation. It records successful completion of the **Next Gen Technologies** course on **September 8, 2026** through **Infosys Springboard**.

Congratulations! You make us proud!

Verification shown on the certificate: verify.onwingspan.com. The certificate image is reproduced from the supplied presentation without alteration.

1. INTRODUCTION

This report presents a structured account of the **Next Gen Technologies** certification program completed by **Vartika Keshari**, Roll No. **25SCS1003005238**, a B.Tech Computer Science & Engineering student at **IILM University, Greater Noida, U.P.**. The course was completed on **September 8, 2026** through **Infosys Springboard**.

The supplied course presentation describes Next Gen Technologies as a structured, self-paced introduction to the emerging technologies driving digital transformation. The learning scope covers Artificial Intelligence, Machine Learning, Cloud Computing, Internet of Things, Blockchain, Cybersecurity, Data Science and Automation.

The learning experience progresses from foundational concepts through guided learning, practice and quizzes, a final assessment, and certification. The emphasis is on building foundational understanding and awareness of how these technologies are used in real-world industry contexts.

Report Objectives

- Document the purpose and rationale of the Next Gen Technologies course.
- Summarise the learning objectives and technology domains covered.
- Present the learning pathway and module-wise course structure.
- Record the skills and capabilities described as course outcomes.
- Document the successful course completion and certification details.

2. ORGANIZATION / PLATFORM PROFILE

Infosys Springboard & Infosys Limited

According to the supplied presentation, Infosys Springboard is Infosys' flagship digital learning platform, powered by Infosys Wingspan. It provides free access to courses covering digital skills, emerging technologies and life skills.

The presentation highlights three key characteristics of the platform: free and accessible learning, a curriculum-rich learning environment delivered across devices, and verifiable course certification. Course completion certificates carry a unique identifier and can be verified through the Wingspan verification portal.

Platform Features Highlighted in the Source

Feature	Description
Free & Accessible	Zero-cost, industry-relevant courses open to students, graduates and professionals.
Curriculum-Rich Platform	Digital and emerging-technology content delivered on any device.
Verifiable Certification	Course certificates carry a unique ID and can be verified online.

The certificate reproduced in this report identifies Infosys Limited, via Infosys Springboard, as the issuing organisation and displays the online verification address shown on the certificate.

3. COURSE RATIONALE

Why Next Gen Technologies

The course presentation explains that emerging fields such as Artificial Intelligence, Cloud Computing, IoT, Blockchain and Cybersecurity are reshaping industries, while academic curricula may cover them primarily at a conceptual level. The course was therefore positioned as a way to close that gap through a structured, self-paced introduction to technologies associated with contemporary digital transformation.

The rationale is built around exposure to the emerging-technology stack rather than a single specialised technology. This broad perspective enables learners to understand the role of multiple technologies and how they relate to modern digital systems.

Course Learning Proagression

The progression represented in the source is: **Explore** → **Understand** → **Apply** → **Assess**. The detailed learning pathway further describes foundation modules, guided learning content, practice and quizzes, a final assessment, and certification.

4. LEARNING OBJECTIVES

What the Course Set Out to Achieve

Objective Area	Learning Goal
Foundational Concepts	Build first-principles understanding of emerging technology domains and their real-world relevance.
AI & Machine Learning	Explore core AI/ML concepts, use cases and how intelligent systems are built.
Cloud Computing	Understand cloud service models and how modern infrastructure is deployed and scaled.
IoT & Automation	Learn how connected devices sense, process and exchange data across networks.
Blockchain Basics	Grasp distributed-ledger principles and their impact on trust and transactions.
Cybersecurity Awareness	Recognise common digital threats and the fundamentals of staying secure online.

These objectives establish the course as a foundational exposure program: the focus is on understanding concepts, recognising applications and developing awareness across multiple next-generation domains.

5. SCOPE OF THE COURSE

The scope of the course spans a broad emerging-technology landscape. Rather than focusing on implementation of one specific application, the supplied material frames the course as a foundation for understanding several technology areas that contribute to digital transformation.

Scope Areas

Artificial Intelligence: Core concepts and applications of intelligent systems.

Machine Learning: Algorithms and data-driven models as a foundation for intelligent applications.

Cloud Computing: Deployment, infrastructure, service models and scalability.

Internet of Things: Connected devices, sensors and data exchange.

Blockchain: Distributed ledgers and trust-oriented transaction models.

Cybersecurity: Digital threats, security awareness and defence fundamentals.

Data Science: Analysis and visualisation of data.

Automation: Process and workflow efficiency through technology.

The course material does not specify a production software project or deployment environment. Accordingly, this report treats the program as a learning and certification pathway and does not claim live production deployment, internship employment, or project deliverables beyond what is shown in the supplied presentation.

6. TECHNOLOGIES AND DOMAINS COVERED

The Emerging-Tech Landscape Explored

Domain	Focus Described in the Course Material
Artificial Intelligence	Core concepts and applications of intelligent systems.
Machine Learning	Algorithms and data-driven models as a foundation for intelligent applications.
Cloud Computing	Deployment, infrastructure, service models and scalability.
Internet of Things	Connected devices, sensors and data exchange.
Blockchain	Distributed ledgers and trust-oriented transaction models.
Cybersecurity	Digital threats, security awareness and defence fundamentals.
Data Science	Analysis and visualisation of data.
Automation	Process and workflow efficiency through technology.

Together, these domains form the technology stack presented in the course: intelligent systems, data-driven learning, scalable infrastructure, connected devices, decentralised trust, security, data analysis and automation.

7. LEARNING PATHWAY AND METHODOLOGY

The supplied presentation describes a progression from foundations to certification. Learners move through foundation modules, guided learning content, practice and quizzes, and a final assessment before receiving the course completion certificate.

Learning Stages

Foundation Modules: Core concepts across emerging technology domains.

Guided Learning Content: Videos, readings and interactive lessons for each module.

Practice & Quizzes: Module-level assessments used to reinforce concepts.

Final Assessment: Comprehensive evaluation of course learning outcomes.

Certification: Course Completion Certificate issued by Infosys Limited.

The methodology therefore combines self-paced conceptual learning with assessment checkpoints. The source presentation does not provide individual marks or scores, so no numerical performance claims are included in this report.

8. COURSE STRUCTURE / MODULE BREAKDOWN

The following table reproduces the eight-module structure presented in the supplied course material.

No.	Module	Description
1	Introduction to Emerging Tech	Landscape of next-gen technologies and their industry impact
2	Artificial Intelligence	Fundamentals of AI and intelligent systems
3	Machine Learning Basics	Core algorithms and data-driven approaches
4	Cloud Computing	Service models, deployment and scalability
5	Internet of Things	Connected devices, sensors and data exchange
6	Blockchain Technology	Distributed ledgers and decentralised trust
7	Cybersecurity Fundamentals	Common threats and digital defence practices
8	Final Credential Assessment	Consolidated evaluation and certification

Module Sequence

The sequence begins with an overview of emerging technologies, moves into AI and Machine Learning, then covers Cloud Computing, IoT, Blockchain and Cybersecurity, and concludes with a consolidated credential assessment.

9. SKILLS AND EXPECTED OUTCOMES

Skills & Capabilities Gained

- Ability to explain core concepts across AI, Cloud, IoT, Blockchain and Cybersecurity.
- Awareness of how emerging technologies are applied to real-world industry problems.
- Foundational vocabulary to engage confidently in next-generation technology discussions.
- Familiarity with the Infosys Springboard learning platform and its assessment structure.
- A verifiable Course Completion Certificate issued by Infosys Limited.

Learning Impact

The principal outcome of the program is breadth of understanding. By connecting multiple technology domains within one learning pathway, the course builds a foundation for further specialisation. The supplied material describes the outcome in terms of concepts, industry awareness, technology vocabulary, platform familiarity and certification.

10. CERTIFICATION

Successfully Completed

Course	Next Gen Technologies
Completion Date	September 8, 2026
Issued By	Infosys Limited, via Infosys Springboard
Verification	verify.onwingspan.com
Candidate	Vartika Keshari
Roll Number	25SCS1003005238

The supplied certificate image confirms successful completion of the Next Gen Technologies course and displays a QR code for verification. It is included earlier in this report as the documentary certificate page.

11. CONCLUSION

The **Next Gen Technologies** program on **Infosys Springboard** provided a structured foundation across a range of emerging technology domains. The course rationale, objectives, technology landscape, learning pathway and module structure collectively support a broad understanding of technologies associated with digital transformation.

Completion of the course on **September 8, 2026** resulted in a Course Completion Certificate issued by Infosys Limited through Infosys Springboard. The certification provides formal evidence of successful course completion and establishes a foundation for continued learning and deeper specialisation in individual next-generation technology areas.

Key Takeaway

The strongest value of the course is its integrated view of emerging technologies: learners are introduced to intelligent systems, data-driven models, cloud infrastructure, connected devices, distributed trust, cybersecurity, data science and automation within one learning pathway.
